INTRODUCTION

Transitioning your corporation to a Faith Based Organisation (FBO) allows you to run your business without having to adhere to typical governmental regulations. An FBO can be referred to as a nation, state, society, church, order, or ministry.

You can set up your own FBO, or you can partner with The Universe which holds many further benefits; including business support, marketing support, access to funding, community, decentralisation and much more. You also receive support in how to set up your own Decentralised Autonomous Organisation (DAO), including access to the tools you need to run a DAO efficiently and successfully.

SETTING UP YOUR DAO

As a member of The Universe you can also set up your own Decentralised Autonomous Organisation (DAO).

A DAO enables a group of people, a non-profit, an organization to operate without an overarching figure of authority, allowing equal members to cooperate and self govern with full transparency.

WHAT IS A DAO?

A Decentralised Autonomous Organisation (DAO) are fraud resistant, transparent, and programmable organisations helping people around the world create new types of organisations that better serve their purpose and values.

DAOs are collectively owned and managed by its members. Rather than concentrating ownership into the hands of founders and investors, a DAO distributes ownership to a variety of stakeholders, including contributors, users, employees and so on.

DAO's help break down the traditional power hierarchies that are responsible for extreme concentrations of wealth.

TRANSPARENCY

Manage your treasury in a secure, transparent, and decentralised way so all members of your community can directly and irrevocably govern together.

OPEN GOVERNANCE

Create an immutable and fraud resistant source of truth for the community regarding policy, governance, role or other decisions.

VALUE FLOW

Control funds and move money only if the members voted to do so. Meaning, that all members get to see and control the flows of value together and choose whether to shut the project down and return pooled capital.

WHAT TO CONSIDER

TOKENOMICS

UTILITY

What is the problem your token seeks to address

TECHNICAL

Ensure feasibility with regards to smart contracts and other key features

MECHANICS

Circulation, supply, demand, inflation and burn rate. How to reach equilibrium in the system.

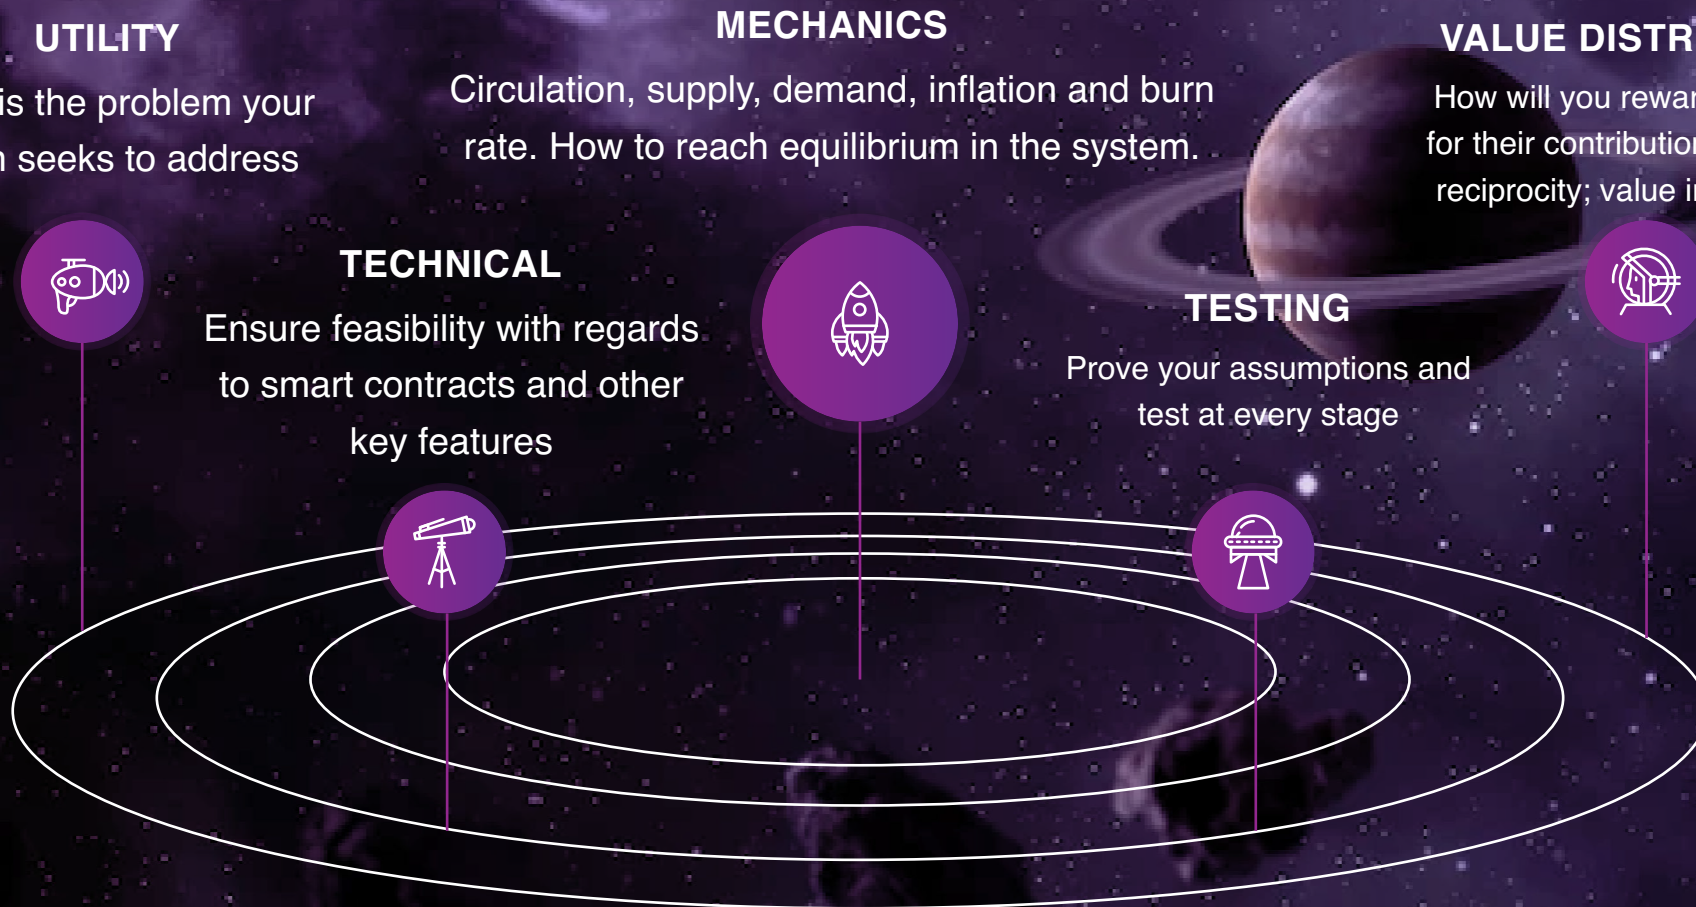

TESTING

Prove your assumptions and test at every stage
